HW0

problem 1: He wants the stars.

Description

One of your best friends in college, Mike, is falling in love with stars. Let's give him some!
I will tell you how many stars he'd like, and please design a program to output the exact number of stars for him.

Input

Starting with an integer, N, in the first line, the input will consist of N cases.
There will be 1 line for each test case, and there's only 1 integer, C_i, in the line for i-th test case, indicating the number of stars your friend Mike wants.

Output

For each test case, output the exact number of stars in a line, ***without*** any separating characters between those stars.

I/O Specification

Your program should be reading input from ***stdin*** and outputting to ***stdout***.
It is guaranteed that $1 \le N \le 100$ and that $1 \le C_i \le 1000$ for all i.
Also, your program is expected to execute fully in 0.1 seconds.

Sample I/O

SAMPLE INPUT

```
5
1
4
10
15
7
```

SAMPLE OUTPUT

```
*
* * * *
* * * * * * * * * *
* * * * * * * * * * * * * * *
* * * * * * *
```
